

CS 490: Senior Team Project

Github Workflow

Lecture 2

Github Workflow

- As mentioned in last class, we'll use Github extensively this semester
- The workflow our teams will use will be based on open-source and industry standards
- Take a look at the [Github Workflow](#) document on the schedule page

Your Team Will Maintain:

- A project tracker
- Issues for each feature/bug you work on
- Separate branches for addressing each issue
- Pull requests for completed work
- Code reviews before branches can be merged

Warmup Project

- A small warmup project is now available on the course website. Let's talk about it, and then go through the Github workflow!
