

CS 490: Senior Team Project

Code Review

Lecture 4

The Process So Far

We have:

- Done one round of design
- Created issues / tasks to complete
- Started working on the code

Submitting a Pull Request

- Once you are finished, you will submit a pull request with your changes
- A template for the PR and a pre-submission checklist is available on the course website
- Teammates can review, make comments on your PR, and you may need to update it before it can be merged.

Code Reviews

- One of the most important parts of the software development lifecycle is performing *code reviews*
- A second (or third, or fourth) review of the code will catch errors and make your project more robust
- It's your responsibility to ensure a maintainable, performant, and robust codebase.
 - One of the major parts of your weekly standup / sprint grade will be the code reviews you completed.

Today

Each group should check in to show their current progress. While other groups are meeting with the instructor, work on code, and if possible, PRs & CRs.
